## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 8/16/2007 has been entered. The amendment to claim 6 is acknowledged.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gradone (US 3,712,296) in view of Trenz et al. (US 6,745,427).

4. Gradone discloses a method of collecting a specimen with a swab and depositing a specimen into a collection device comprising: (a) providing a swab (figure 1) having a swab tip which is releasably attached to one end of a unitary elongate handle (18); (b) providing a sleeve (14) which is not attached to said swab tip and is slidable along said handle; (c) collecting a specimen on said swab tip (column 2, lines 33-35); and (d)

Art Unit: 3736

placing said swab such that said swab tip is adjacent to an opening in a collection device (column 2, lines 36-39).

5. Although Gradone discloses displacing the swab tip into a collection device without any of said handle or said sleeve being attached by pushing the handle (column 2, lines 36-43), a step of urging the sleeve along the handle and against the swab tip to remove the swab tip completely from the handle is not expressly disclosed.

6. Trenz teaches an alternative means for removing a tip from a handle. In particular, Trenz teaches urging a sleeve (6 in figure 2) along a handle (5) and against a tip to remove the tip completely from said handle allowing said tip to drop without either of said handle or said sleeve being attached. The configuration of Trenz allows the tip to be removed without touching the tip itself (column 1, lines 43-46). Note that it is well known and routine in the art to substitute alternative known elements and steps.

7. Therefore, it would have been obvious to one having ordinary skill in the art at the time of invention to have modified the method of Gradone by urging a sleeve against the tip as taught by Trenz in order to achieve the predictable result of removing the swab tip without touching the swab tip itself.

### ***Response to Arguments***

8. Applicant's arguments with respect to amended claim 6 have been considered but are moot in view of the new ground(s) of rejection.

**Conclusion**

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Mueller, JR. (US 2004/0260201) discloses a cytology brush with a releasable end portion.
